Education

Indian Institute of Technology, Madras

July 2016 – May 2020

Bachelor of Technology in Chemical Engineering

6.25/10

Technical Skills

Primary Skills: Java Spring Boot, RESTful services, OOP, SOLID principles, System Design, C++, Microservices, Kubernetes
Languages: Java, C/C++, Python, Javascript, Scala, PHP, Bash, MATLAB, LaTeX
Big Data: ETL, Spark, Databricks, AWS (EC2, S3, EMR), Hadoop, MySQL, MongoDB, Neo4j
Software Development: OOP, SOLID principles, System Design, Junit/Mockito, CI/CD, Agile methodologies, Git, Observability and Monitoring
AI/ML: Linear regression, Time series classification, Decision trees, Random forests, Neural networks
Technologies/Frameworks: OpenMP, Parallel programming, Docker, RabbitMQ, Redis, Apache Nifi, Apache Thrift, Payment gateways, Junit/Mockito, NodeJS, ReactJS, HTML/CSS

Experience

iACE Lab @ IIT Madras

Oct 2023 – Present

Project Scientist

- Working in the Intelligent Applications in Chemical Engineering (iACE) Lab under Prof. Rajagopalan Srinivasan. Current research focus: XAI methods for Defect Prediction in Process Systems.
- Exploring post-hoc explainability techniques for multivariate time series classification, to increase reliability, fairness and trustworthiness in AI systems used by chemical plant operators with varying domain expertise and experience.

HILCPS Lab @ IIT Madras

Oct 2023 – Present

Software Consultant

- Concurrently involved with the Human-in-the-Loop Cyber-Physical Systems (HILCPS) Lab, led by Prof. Babji Srinivasan.
- My main responsibility here is to guide the research group on implementing enterprise-level best practices and team values.
- This involves conducting code reviews and interactive sessions covering various aspects of software engineering, including collaboration, agile methodologies, version control, and code hygiene.

Capillary Technologies

May 2020 – Sep 2023

Software Developer, Payments

Dec 2021 – Sep 2023

- Designed and implemented POTATO (Over-The-Air Transactions Orchestrator), a robust and comprehensive solution that facilitates seamless, cashless fuel transactions at gas stations.
- Executed the entire development process, constructing the microservice architecture including a Spring Boot-based application and databases using MySQL and MongoDB.
- Built highly secure REST APIs for communication with Payment Service Providers and fuel stations.
- Continually optimized the system performance, which leverages RabbitMQ to efficiently handle real-time transactions, accommodating a user load exceeding 10,000 per minute.
- Additionally, took charge of instituting a CI/CD pipeline and implementing real-time monitoring systems to ensure optimal functionality.

Big Data Engineer, Extract-Transform-Load (ETL)

Oct 2020 – Nov 2021

- Contributed to feature development and optimization of the in-house data warehousing and ETL system managing Capillary's flagship CRM and BI tool, processing over 6 billion new daily records.
- Managed ETL processes using Spark clusters on AWS Elastic Map Reduce (EMR), including data cleaning, transformation, and the generation of a star schema-based model with facts, dimensions, and KPIs.

Intern

May 2020 – Sep 2020

- Built internal developer tools to handle the ETL process. This includes GUIs for end-to-end control and monitoring of executions from Neo4j, where the queries are stored as a Directed Acyclic Graph.

Tesco

May 2019 – Jul 2019

Software Engineering Intern

- Automated Tesco's food donation system by eliminating a labor-intensive step in stock management, optimizing processes for 2500+ stores and 6000+ charities.
- Developed a Donation Assistant API for product classification, implemented an Apache Nifi and Python Flask based pipeline, reducing administrative workload by 20%, and enhanced donation accuracy/relevance by over 15% through data analysis using R tidyverse package.

Crest IT Consulting

Jun 2018 – Jul 2018

Web Development Intern

- Took up a complete rebranding initiative for the company, involving the development of a new website, logo, and brand identity. Check out the results at crestit.in.

Activities and Projects

Projects

- **Yuj (formerly Caval):** Contributed as a founding team member for this IITM-based startup, which provided doorstep vehicle repair services. Led the development of the entire branding, logo, website, app, and other marketing materials.
- **ChemClave:** Created the ChemClave 2017 website as part of the WebOps team, for the annual event organised by the Chemical Engineering Society (CheS) of IIT Madras.
- **Cuckoo Dooku:** Developed a Star Wars themed, open source Chrome extension for productivity. Received a commendation in the FOSS hackathon 2021. See github.com/omkrpt/cuckoo-dooku
- **Snake Game:** Coded the game from scratch as a high school project. See omkarpote.com/#snake

Graphic Design

- **Technical Proficiency:** Skilled in graphic design using the Adobe Suite including Photoshop, Illustrator, Premiere Pro and Indesign
- **Freelance Experience:** Freelanced for various clients from Dec'16 to Aug'18. Portfolio at behance.net/omkarpote
- **Head of Design, Entrepreneurship Cell, IIT Madras:** Led a team of 16 designers and associate designers, developing creative content for digital and printed media, over the course of two semesters.
- **Inter IIT Sports Meet:** As part of the organising team of the 2017 edition, designed marketing content, venue setups and ambience for the tournament.

Extracurriculars

- **Department Football Team Captain:** Led the Chemical Engineering department football team to a third-place finish in the IITM Inter Department League 2018-19.
- **Karate:** Black belt holder with numerous accolades and medals on the national level, showcasing over 11 years of dedicated practice.
- **Music Certification:** Successfully cleared ABGMVM's Hindustani Classical Music Exam with an impressive score of 45/50.
